Melbourne, VIC, Australia

SUMMARY

Master's student in Information Technology at RMIT University with a strong foundation in backend development, cloud technologies, and scalable system design. Hands-on experience building API-driven applications, data processing systems, and database solutions through internships in India and project work with an Australian RegTech company. Skilled in Python, AWS, Linux, REST APIs, and database technologies, with a growing interest in cloud engineering, DevOps, and distributed systems. Quick learner with strong problem-solving and collaboration skills.

EDUCATION

Master of Information Technology | RMIT University, Melbourne, Australia **Expected: Dec 2025**
Bachelor of Technology in Information Technology | CHARUSAT, India | CGPA: 8.78/10.00 **May 2023**

TECHNICAL SKILLS

Cloud & Systems: AWS, Linux, Cloud Computing Fundamentals, Time-Series Data Storage

Languages: Python, Java, JavaScript, PHP, HTML5, CSS3, SQL, C

Technologies: Django, NodeJS, Angular, Flutter, Firebase, REST APIs, AWS, Git, Linux

Familiar with: Blockchain/Cryptocurrency Systems, Machine Learning, NLP (BERT, GPT-3), RegTech

Database: MySQL, MongoDB, Time-Series Data Storage

PROFESSIONAL EXPERIENCE

Software Engineer - Digital Asset Custody Solutions (DACS) **July 2025 - Nov 2025**
RMIT Work Integrated Learning Program, Melbourne, Australia

- Built a high-volume cryptocurrency price database system processing 100,000+ data points daily across 2 major currencies (USD, AUD) to support regulatory compliance for ATO, IRS, HMRC, and OECD requirements
- Engineered RESTful API with automated price aggregation from major exchanges (Binance, Kraken, CoinGecko) and designed database infrastructure with complete audit trails for regulatory attestation
- Collaborated with business stakeholders to translate complex regulatory requirements into technical solutions, delivering production-ready system with comprehensive documentation for global deployment

Web Developer - Crown Software, Junagadh, India **Jan 2023 - May 2023**

- Led development of MD Hostel Management System from concept to deployment, digitizing operations for 500+ students and staff with automated room allocation, fee tracking, and attendance monitoring
- Enhanced application performance through AJAX implementation, dramatically reducing page load times and improving user experience, resulting in higher engagement and fewer support requests
- Mentored 4-person development team on Git workflow and code quality standards while refactoring 5,000+ lines of legacy code to improve maintainability and system reliability

Flutter Developer - Indegeneous, Surat, India **May 2022 - June 2022**

- Architected complete frontend for medicine reminder application serving 200+ beta testers, working directly with clients to translate business requirements into technical features
- Established consistent design system across 15+ app screens, ensuring uniform visual experience through standardized components and layouts
- Created comprehensive technical documentation covering architecture and Firebase integration, streamlining future development

Web Developer - Simulas, Ahmedabad, India **June 2021 - Aug 2021**

- Developed EZYINN hotel management system for 10+ properties featuring integrated booking, inventory, and billing modules
- Built responsive user interfaces with excellent cross-browser compatibility using modern HTML5, CSS3, and JavaScript
- Managed 8+ concurrent client projects, maintaining consistent on-time delivery through proactive communication and detailed progress reporting

KEY PROJECTS

BERT NLP Research **July 2022 - Nov 2022**
Researched transformer models (BERT, GPT-3, BART, XLNet) to understand modern NLP architectures, implementing sentiment analysis models and producing comprehensive technical report on attention mechanisms.

Customer Segmentation **Jan 2022 - May 2022**
Built ML pipeline segmenting 10,000+ customer records into distinct clusters using K-means algorithm, identifying key behavioral characteristics to enable targeted marketing strategies.

YouTube Summarizer **Aug 2021 - Dec 2021**
Developed Chrome extension using TF-IDF and TextRank algorithms to auto-generate video summaries, successfully processing diverse video content and significantly reducing review time.
